

Sleek, Smooth Control

Applications

Leviton Decora SureSlide® controls provide smooth, slide-action, full-range dimming for a variety of load types. Pre-set models feature a separate ON/OFF switch, allowing the user to set the desired brightness level to operate automatically with the ON/OFF function. The 6672 is a slide-to-off model for users who choose to adjust lighting levels each time the device is used.

The SureSlide line offers models that are designed specifically for dimmable LED and CFL lamps, models for ELV applications, and also a fan speed control.
